

Agile Scrum Tracker

Working Prototype Known Problems Report

Team: Ryan Bahl , Matthew Zurlin , Brandon Kwe, Niland Schumacher

Date: 12/1/2021, Fall Quarter UCSC

Software issues(Not working Correctly):

- Task Entry: Using the “Return” key for entry completion.
 - When adding a task to a user story if the user presses “Enter” the task does not save and the whole program loses focus on the current product.
- Scrum board Task Display: On some Displays scroll bars can be seen with tasks.
 - Depending on the individual display’s(Browser or even monitor) tasks on the scrum board might be displayed with scroll bars.
- Add Sprint: “Warning: Can't perform a React state update on an unmounted component”
 - When user Clicks “Add Sprint” Button, a Warning message is displayed.(appears to only be on first use.)
- Create Task: “Warning: Can't perform a React state update on an unmounted component”
 - When user Clicks “Create” for creating User Story. Get warning.(appears to only be on first use.)
- Move Task between Stages: “Warning: Can't perform a React state update on an unmounted component”
 - When moving a task to next stage, these error might occur.(appears to only be on first use.)
- User Stories Display on Scrum Board: User Stories do not respond immediately to priority change.
 - When User Story Priority is bumped on scrum board it doesn't move immediately.
- If the browser is set to deny pop ups, then clicking the login button can cause a crash.
 - There may be an alert asking to allow pop ups, click yes to avoid crash
